Complete guide to install and configure the converter and HUD for PPPoker

Over the past few years, mobile poker apps from Asia have become a breath of fresh air for professional players. Very lucrative pools and weak opponents have become a powerful argument for the poker migration. And the constantly deteriorating playing conditions in the leading poker rooms stimulate even the most conservative players to seek alternatives.

One of the most popular mobile applications is PPPoker. In terms of traffic volume, PPPoker significantly surpasses most similar places for the game. The mobile poker room regularly holds various promotions to attract new players, signs contracts with professional players, and even conducts large offline series. Everything seems to be good, but what's the catch?

The catch lies on the surface: PPPoker is a mobile poker application, which means that neither PokerTracker 4, Holdem Manager 3, Hand2Note, nor DriveHUD can directly import hand histories from there. Hence, no HUD and no statistics while playing. Are we putting an end to the plans to develop new PPPoker waters? No matter how it is! There is a solution and it is called "PPPoker HUD Catcher".

What is PPPoker HUD Catcher?

PPPoker HUD Catcher is a poker program that works in conjunction with Holdem Manager 3, PokerTracker 4, Hand2Note, DriveHUD and allows you to display HUD and import hand history while playing in the PPPoker application. Unlike most other Asian poker applications, PPPoker has recently had a significant advantage - an official client for Windows. In practice, the availability of PPPoker on PC also saves you from a headache of setting up Android emulators. HUD Catcher works both at cash tables and in tournaments.

The poker room does not prohibit the use of poker trackers (although there is no separate list with allowed programs on PPPoker). In practice, no one had any problems with the HUD.

DriveHUD;
Holdem Manager 2;
Holdem Manager
3;
PokerTracker 4;
Hand2Note.
Hands are also imported into Holdem Manager and Poker
Tracker 3, however the HUD will not work in old versions of trackers. Card Catcher will
automatically configure your import folders. However, we recommend that you
double-check to make sure the database is being imported from the correct folder. We
will tell you how to do this separately for each tracker below.
How to set up PPPoker
HUD Catcher for PokerTracker 4?
1. In PokerTracker 4, check the import folder setting
 by clicking "Configure" in the top menu options. Then click "Site & Import Options".
Select iPoker from the list of poker networks on the left. Make sure the checkbox next
to "Get Hands From Site While Playing" is checked. Make sure the path to the correct
folder is specified in the "Directories Configuration". If you used the default
installation directory, it will be: C: \ Program Files (x86) \ Ace Poker Solutions \
PPPoker Card Catcher \ HandHistories. If it's not there, click the "Add" button and
add: C: \ Program Files (x86) \ Ace Poker Solutions \ PPPoker Card Catcher \
HandHistories. Click OK and close the screen.
2. Start the PPPoker client and log into
your account.
3. After import folder is configured properly, make sure PPPoker Card
Catcher shows "Stop Catching" message (which means it loads hands while playing and

creates hand histories) in the main interface. If for some reason this does not happen, click "Stop Catcher".

4. Finally, in Poker Tracker 4, click "Play Poker" and "Get Hands While Playing".

5. Load multiple tables using the PPPoker app and start playing. The HUD will need a few hands to work properly and then it will appear on the tables.

How to set up PPPoker HUD Catcher for Holdem Manager 2?

1. In Holdem Manager 2, click on "Site Setup". On the left side of the preferences window, choose "iPoker". Under Auto Import Folders, make sure the correct (PPPoker Card Catcher) import folder is selected. If you used the default installation directory, it will be: C: \ Program Files (x86) \ Ace Poker Solutions \ PPPoker Card Catcher \ HandHistories. If it's not there, click the green plus button and add: C: \ Program Files (x86) \ Ace Poker Solutions \ PPPoker Card Catcher \ HandHistories. Click "Close" to complete the settings.

2. Start the PPPoker client and log into your account.

3. After import folder is configured properly, click "Start Catcher" in PPPoker Card Catcher.

4. That's it, import is set up. You may need to click on "Stop HUD" and "Start HUD" on the "Active Session" screen of Holdem Manager, but this is not necessary.

If you want to manually attach the HUD, follow these steps:

In Holdem Manager 2, click the "Active Session" tab. Choose whether you are playing cash games or tournaments and then click "Stop HUD". Then click "Start HUD" and wait until you have played at least one hand on the table you are sitting at. Once you play your hand, click the Table Finder button.

In the table search pop-up window, select one of the tables you are playing at, and then right-click and hold down the cross in the lower left corner of the screen and drag it to the corresponding table name. Make sure to match the table you selected first to the table you are now dragging the cross to.

Finally, he will ask you if you want to add a HUD to this table. Make sure the table name is correct and click OK. Repeat the steps for each table you play at.
